ECORI; cDNA made by oligo-dT priming. Directionally cloned into ECORI/Xhol sites using the following 5' addaptor: GGCACGA(G). Size-selected 5500bp for average insert size 1.8kb. Library constructed by Ling Hong in the laboratory of Gerald M. Rubin (University of California, Berkeley) using ZAP-CDNA synthesis kit (Stratagene) and Superscript II RT (Life Technologies). Note: this is a NIH MGC Library."
                                                                                                                                                                                                                                                                                                                                                                                                                                    1719
